

Information regarding the «new» Mobil Serv – Lubricant Analysis:

The old Marine Signum is now upgraded and is **called Mobil Serv**.

More information can be located in the main menu for Mobil Serv, under Mobil Serv – help!

What happens to the **old** Marine Signum/**new** Mobil Serv bottles?

1. If you have an old Marine Signum bottle, use this first.
2. Send in the analysis as you have always done – regardless of “old” or “new” bottle.

Remember to pay postage. If you do not pay, the package will not be sent!

All previous analysis/history will be available in Mobil Serv.

Regarding Mobil Serv bottles/labels

There is a new distinction on the labels for the Mobil Serv bottle.

Size: 105 x 57mm – 10 labels per sheet (previously, there were eight labels per sheet).

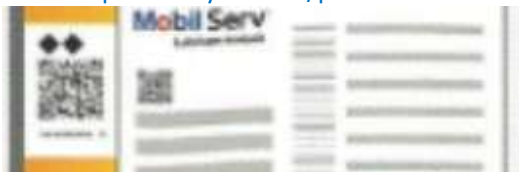

Before you print, remember to choose this for the mentioned labels/size:

Select Print Template:

Check list:

1. The new bottles look the same, but they already have three ID/barcodes glued on.
2. With **an ID free** on the bottle (**left**), including one Mobil Serv label glued on, you will have another possibility to scan/pair the mentioned two ID's together:

Regardless, it is not necessary to use the scanner to analyse with Mobil Serv.

Most of you already know the previous Marine Signum, where it was easy to glue the label onto the bottle, **pay the postage** and send in the analysis. **It is the same, simple procedure with Mobil Serv.**

The address is still the same:

Laboratory: Pernis – The Netherlands	
<i>By Airmail:</i> Mobil Serv Lubricant Analysis P.O. Box 160 3190 AD Hoogvliet The Netherlands	<i>By Courier:</i> Mobil Serv Lubricant Analysis Butaanweg 161 3196 KC Vondelingenplaat RT The Netherlands

Good luck!

Best Regards
